Emigre Tells of Research in Soviet In Parapsychology for Military Use

By FLORA LEWIS

Special to The New York Times

physicist says that the Soviet Union has been doing secret work in parapsychology, for what appear to be military and police purposes.

The Soviet emigre, August Stern, who a secret Siberian laboratory in the late 1960's trying to find a physical basis for are called.

demonstrated in the case of Robert C. Toth, a correspondent of The Los Angeles in Moscow by the K.G.B., the security police, and was accused of having received "state secrets" about parapsychology. He was allowed to leave for home after protests by the United States Government.

In Washington, officials said the intelligence community was aware of Soviet research in parapsychology, but added that American specialists did not believe the Russians had made any unusual discoveries. One official said

PARIS, June 18-An emigre Soviet some Soviet work appeared aimed at developing psychological warfare methods.

The Toth incident had the earmarks of an entrapment, in the view of some diplomats. There is no sign that the 25now lives in Paris, spent three years in page document on parapsychology handed to him on the street just before he was seized contained important informapsychic energy, or "psi particles," as they tion. However, there is a record of Soviet sensitivity and August Stern's informa-Moscow's interest in the subject was tion indicates that parapsychology is a matter of concern to the authorities.

Mr. Stern is a son of Dr. Mikhail Stern, Times, who was interrogated this week an endocrinologist who was imprisoned before being allowed to leave the Soviet Union in March. August Stern said he was told before leaving the Soviet Union two years ago that an even more secret laboratory than the one he knew in Siberia had been set up in Moscow under the direction of the K.G.B.

A French scientist and former intelligence agent, Jacques Bergier, has written a book saying that extrasensory percep-

tion, one of the theories studied by parapsychology, may be used in espionage, thought control, surveillance and as a form of weapon.

Parapsychology covers four specific fields of nonphysical phenomena. They are telepathy (transmission of thought without use of the senses), extrasensory perception, telekinesis (transmission of motion without any evident use of physical energy) and clairvoyance (the ability to see distant or future events without physical intervention).

Most scientists remain skeptical that such phenomena actually exist, but there are researchers throughout the world dedicated to proving and, if possible, explaining them.

Formal, officially subsidized Soviet research in the field has gone on for years, sometimes publicly vaunted and at other times denounced and even denied.

U.S. Navy Was Interested in 1950's

At one time in the late 1950's and early 1960's, the United States Navy and the Stanford Research Institute did experiments in telepathy to see whether it could provide an undetectable means of communicating with submarines. So far as is known, the experiments failed. But owrd of them reached Moscow and apparently provoked high-level interest in the

Robert C. Toth, Los Angeles Times correspondent, in London yesterday.

The laboratory was in Novosibirsk's Science City, a complex belonging to the Siberian branch of the Academy of Sciences. It was in a separate building, and the door could be opened only by a coded lock with the code of Automation and Electrometry. terred to as a branch of the Institute changed Special Department No. 8" and was re Mr. Stern's reminiscenses of the labora

Headed by a Navy Officer

The head was Vitaly Perov, a navy officer, who opened it in 1966, Mr. Stern said. It recalled that Mr. Perov showed deference to two visitors who came in the early days to check on theinstallation. Mr. Stern believed the visitors to

at the laboratory. The scientists among them were given virtually unlimited funds for elaborate equipment. "It cost many millions," Mr. Stern said. His own work was in theoretical physics. His view was that there might be an orderly system in which all kinds of energy could be charted, similar to Mendeleyev's periodic o fthe periodic table, which originally left some blank spaces, unknown elements country until there were about 60 persons table of chemical elements. As a result unknown elements

might lead to physical identification of particles to explain the mystery of psychic energy, the "psi particles." If such a chart could be discovered for energy, Mr. Stern thought, it, too, might be found to have blank spaces that

mothers, three floors upstairs, registered any reaction through some mental connection; television surveillance of people nothing. Other experiments at the laborato send them telepathic orders; studies involving monkeys and electromagnetic to attempts by others several rooms away in a room to see whether they responded newly-born kittens to see whether their tory involved applying electric shocks to
